

Day 28 – AI Screening Report Generator

Zecpath AI System – Implementation & Deliverables Report

Objective: To transform raw AI evaluations into recruiter-friendly insights.

1. Day 28 Scope

Detailed Task	Implementation Status
Generate structured screening reports.	Completed
Summarize key answers, strengths, risks, and missing data.	Completed
Highlight salary expectation, availability, and skill confirmations.	Completed
Design an exportable recruiter-ready report format.	Completed

2. Deliverable 1 – AI Screening Report Builder

Implemented **screening_report_schema.py** and **screening_report_builder.py**. The builder creates a structured ScreeningReport containing candidate identity, score, decision, key answers, strengths, risks, missing information, salary expectation, availability, confirmed skills, and recruiter recommendation.

ScreeningReport Schema

```
from dataclasses import dataclass, field
from typing import List

@dataclass
class ScreeningReport:
    candidate_id: str
    screening_score: float
    decision: str
    key_answers: List[str] = field(default_factory=list)
    strengths: List[str] = field(default_factory=list)
    risks: List[str] = field(default_factory=list)
    missing_information: List[str] = field(default_factory=list)
    salary_expectation: str = ""
    availability: str = ""
    confirmed_skills: List[str] = field(default_factory=list)
    recommendation: str = ""
```

3. Deliverable 2 – Recruiter-Ready Report Format

Implemented **recruiter_report_formatter.py**. The formatter converts a structured ScreeningReport into a readable recruiter-facing text report with clearly separated sections.

Report Sections

- Candidate ID, screening score, and decision
- Key Answers
- Strengths
- Risks
- Missing Information
- Candidate Details: Salary Expectation and Availability
- Confirmed Skills

- Recruiter Recommendation

4. Deliverable 3 – Sample Screening Reports

Sample Report A – Strong Candidate

Field	Value
Candidate ID	CAND-001
Screening Score	91.67
Decision	strong_candidate
Key Answers	Experienced with Python and Machine Learning
Strengths	Strong technical knowledge; High confidence
Risks	Limited experience
Missing Information	Notice period
Salary Expectation	6 LPA
Availability	Immediate
Confirmed Skills	Python; Machine Learning; FastAPI
Recommendation	Candidate is recommended for the next recruitment stage.

Sample Report B – Review Candidate

Field	Value
Candidate ID	CAND-002
Screening Score	65.0
Decision	review
Key Answers	Has basic Python and data analysis experience
Strengths	Good communication
Risks	Limited Machine Learning experience
Missing Information	Salary expectation
Salary Expectation	Not provided
Availability	15 days
Confirmed Skills	Python; Pandas
Recommendation	Candidate requires recruiter review before proceeding.

5. Test Results

Test	Result
ScreeningReport schema creation	PASS
Strong candidate report builder	PASS – score 91.67

Review candidate report builder	PASS – score 65.0
Recruiter-ready formatter	PASS
Sample screening reports generation	PASS

6. Files Implemented

File	Purpose
screening_report_schema.py	Defines the ScreeningReport data structure.
screening_report_builder.py	Builds structured AI screening reports.
recruiter_report_formatter.py	Formats reports for recruiter-friendly reading.
sample_screening_reports.py	Generates sample screening reports for validation.

Final Status: DAY 28 IMPLEMENTATION COMPLETE

The Day 28 requirements have been implemented and tested. The completed components transform structured screening evaluations into recruiter-friendly screening reports and include sample reports demonstrating the implemented format.
