

ZECPATH AI PRODUCT & AI OVERVIEW

Day 1 Internship Deliverables

Submitted By

Name: Shinas PN

Internship: Data Science Engineer Intern

Date: 24 July 2026

Submitted To

Company: Zecpath

Department: Product & Engineering Team

1. Zecpath Hiring Lifecycle Flow

2. AI Engines and Their Responsibilities

<u>AI Engine</u>	<u>Responsibility</u>
Resume Parser AI	Extracts skills, education, certifications, experience, and contact details from uploaded resumes.
ATS Scoring AI	Matches resumes with job descriptions and ranks candidates using AI-based scoring.
Candidate Eligibility AI	Applies role-specific eligibility rules before further evaluation.
AI Voice Calling Engine	Makes multilingual AI phone calls to shortlisted candidates.
Speech-to-Text AI	Converts candidate speech into text for analysis.
Natural Language Understanding AI	Understands candidate responses and intent.
HR Interview AI	Conducts automated HR interviews with dynamic follow-up questions.
Technical Interview AI	Conducts technical interviews based on job role and experience.
Machine Test AI	Creates and evaluates coding or practical assessments.

<u>AI Engine</u>	<u>Responsibility</u>
Communication Analysis AI	Scores fluency, grammar, clarity, confidence, and speaking pace.
Behavioral Analysis AI	Evaluates facial expressions, eye contact, confidence, stress, and body language.
Integrity Detection AI	Detects cheating, tab switching, multiple faces, and external assistance.
Camera Validation AI	Verifies identity and interview environment before and during interviews.
Aptitude Assessment AI	Evaluates reasoning, logical thinking, and problem-solving.
Scheduling AI	Automatically schedules interviews based on recruiter and candidate availability.
Notification AI	Sends interview reminders through email and AI voice calls.
Salary Negotiation AI	Suggests offers and handles negotiation based on skills, experience, and company budget.
Decision Engine AI	Combines ATS, HR, technical, behavioral, and machine test scores into final recommendations.
Report Generation AI	Produces interview summaries, strengths, weaknesses, and recruiter reports.

<u>AI Engine</u>	<u>Responsibility</u>
Offer Letter AI	Generates branded offer letters automatically.
Analytics AI	Tracks hiring funnel metrics, recruiter performance, and candidate conversion rates.

3.Zecpath AI Responsibilities Overview

Introduction

Zecpath is an AI-powered recruitment platform designed to automate the complete hiring lifecycle for organizations of all sizes. It uses Artificial Intelligence to reduce recruiter workload, improve hiring accuracy, minimize bias, and provide a faster and more engaging experience for candidates. The platform supports the entire recruitment journey—from job posting and resume screening to interviews, salary negotiation, offer generation, and onboarding.

AI Across the Hiring Lifecycle

The recruitment process begins when a company creates a job posting. Candidates register on the platform and upload their resumes. The Resume Parser AI extracts structured information such as education, skills, certifications, and work experience. The ATS Scoring AI then compares candidate profiles with job requirements and ranks applicants using role-based matching. Candidates who

satisfy the eligibility criteria are automatically shortlisted for the next stage.

Shortlisted candidates receive automated AI voice calls in their preferred language. During these calls, the AI gathers information about the candidate's background, experience, availability, expected salary, and communication skills. Voice responses are converted into text using speech recognition and analyzed using natural language processing techniques to generate screening scores.

Candidates who successfully complete the screening stage proceed to AI-powered HR interviews. The AI interviewer asks dynamic HR questions, evaluates communication skills, confidence, grammar, vocabulary, and behavioral traits, while monitoring facial expressions, eye contact, and interview integrity. These evaluations provide recruiters with objective and standardized assessments of candidate performance.

The platform then conducts AI-driven technical interviews where questions are generated according to the candidate's experience level and job role. Adaptive follow-up questions, technical skill evaluation, behavior monitoring, and malpractice detection ensure that each candidate is assessed fairly and consistently. AI-generated summaries and recommendations are produced for recruiter review.

For roles requiring practical skills, Zecpath administers AI-based machine tests in secure browser environments. The platform evaluates code quality, correctness, efficiency, and problem-solving ability while monitoring candidate behavior to detect potential cheating or unauthorized assistance. All results are integrated into the overall candidate evaluation.

In the final stages, the Salary Negotiation AI recommends compensation packages based on candidate qualifications, previous interview performance, market salary benchmarks, and organizational budget constraints. Once a hiring decision is finalized, the Offer Letter AI generates branded offer letters, sends confirmation emails, tracks candidate acceptance, and supports onboarding activities automatically.

Business Benefits

By integrating AI throughout the hiring process, Zecpath helps organizations:

- Reduce manual recruitment effort.
- Improve hiring speed and efficiency.
- Standardize candidate evaluation.
- Support multilingual recruitment.
- Reduce unconscious bias.
- Scale recruitment for large hiring campaigns.
- Generate detailed recruiter insights and analytics.
- Deliver a better candidate experience.
- Automate offer generation and onboarding.

Conclusion

Zecpath represents a comprehensive AI-first hiring platform that automates every major stage of recruitment. Through resume intelligence, conversational AI, automated interviews, technical assessments, behavioral analysis, salary negotiation, and offer management, the platform enables faster, fairer, and more data-driven hiring decisions while reducing operational costs and improving overall recruitment quality.
